ABOUT ME

Frontend developer who picked up React, Next.js, React Native, and TypeScript on the side while working a full time non technical job. Built Linkly, a app with a companion website. Currently working on StruxJS Playground, a code editor with live preview and GitHub login. I like seeing things through properly documented and actually deployed, not left half finished in a folder. Based in Kolkata, looking to move into frontend or full stack development full time.

EXPERIENCE

Management Trainee — Brainware University

April 2026 – Present

- Approached and maintained relationships with companies for campus hiring, acting as the point of contact between recruiters and the university.
- Coordinated student placement drives, working with academic departments to organize schedules and keep students informed

PROJECTS

Linkly - Offline profile sharing app

- Built a mobile app for creating and sharing personal link in bio pages, with QR code based profile sharing.
- Handled local data encryption and secure storage for user profiles.
- Built and deployed a companion marketing website with proper metadata and sitemap setup.
